

DYNAMIC RESEARCH TECHNOLOGIES

March 30, 2008

I've spent most of my life training in various shooting arenas, with 20 years of it serving in the US Navy SEAL Teams, 11 years as a USMC trained military sniper. My experience with non-lead projectile technology is extensive. Having applied DRT's technology in military, hunting and target applications, I believe their non-lead projectiles are the answer. DRT bullets continue to amaze me with their unlimited performance and application potential. DRT bullets answer most every requirement with an array of application possibilities. This includes incredible unmatched accuracy and one shot terminal effectiveness, especially in long range hunting applications where DRT projectiles prevail as the only answer. With DRT technology, I'm completely converted to non-lead shooting. For me, either in reloading or in production ammunition, DRT bullets are the only bullets to use...period.
